**B100BTPA**  
Fender Mounting Instructions for MIN100, MIN150, MIN1600, MIN161200, MIN1900, MIN2200, MIN221800, MIN2260, MIN2480 & MIN9950 Fenders

**STEP 1**

A. Unpack all cartons and lay out parts.

B. Compare the parts with hardware kit B100BTPA as shown in Figure 1.

**STEP 2**

A. Measure the suspension travel. This measurement is used to determine the distance between the fender and the wheel.

   a. For air suspension systems, let the air out of the air bags.

   b. For spring systems, measure from the stops on the springs to the bottom of the frame.

**NOTE: For air suspensions with travel exceeding 6”:**

In some cases a travel stop may need to be installed to prevent such large gaps between the fenders & tires. This will help with alignment and 5th wheel plate clearance. *(Please call Spray Control @ 800-248-3855 for questions regarding this issue).*
B. Gap the fenders ¾” over the maximum travel point of the suspension system. The goal is to make sure the fender does not rub on the tire. A gap over ¾” may be necessary if using worn tires.

**TIP:** Establish the ¾” minimum gap required in Step 2B.

a. For an air suspension system, place a ¾” board on top of the tires after the air has been let out of the airbags (Figure 2). Place the fender on top of the board.

b. For a spring suspension system, add ¾” to the measurement from Step 2A.

### STEP 3

A. Position the fenders exactly where they will be mounted.
   a. Visually pick and mark the locations that the brackets will bolt to the frame.

B. Try to use existing holes in the frame to bolt through. It is possible to remove any existing frame bolt and replace it with the supplied bolt in the bracket kit.

**Tip:** It is common for the front bracket to align with the existing quarter fender holes and the rear bracket to align with the holes left from the mud flap hanger.

**NOTE:** Depending on the length of the truck frame and the placement of the mud flap hangers, the fender may tuck inside the mud flap hanger. Figure 3 shows a truck with flaps and fenders.

**NOTE:** Do not drill into the weld or any other part of the light box. If a mud flap is mounted to the light box style fender and the mud flap is backed over, it may cause the interior welded plate to become loose. Slot the mud flaps to prevent this issue. This is NOT covered under warranty.
Spacers are supplied to bring the steel swivel away from the frame in the event of any obstructions (Figure 4).

a. The ideal setup is to mount the steel swivel directly to the frame.

**NOTE:** Use spacers only when necessary.

C. Make sure the brackets are within 10" of the bottom of the fender to avoid wind blowing the fender back into the tire (Figure 5).

**Tip:** If the front fender bracket is mounted higher than 10", run a piece of steel strapping on the inside of the fender to give it extra strength.

---

**STEP 4**

A. Use four 5/16" x 3" bolts to attach the bracket (part number PB501026) and the backing block (part number PBLOCK) to the steel swivel (part number PB5015).

**Tip:** Do not use tools at this point to tighten the bolts. This will allow the bracket to rotate on the swivel during installation (Figure 6).

---

**STEP 5**

A. Once the brackets are placed in position with the fender, securely tighten the 5/8" x 4-1/2" bolts that go through the PB5015 steel swivel to attach the swivel securely to the frame (Figure 7).
TIP: USE A WRENCH TO HAND TIGHTEN THE BACKING BLOCK TO BRACKET PB501026A. DO NOT USE POWER TOOLS AS OVER-TORQUING WILL CAUSE CRACKS IN THE BRACKET.

NOTE: THIS WILL VOID THE WARRANTY.

TIP: Do not completely tighten one side of the backing block before moving to the other side. Alternate tightening bolts as pictured in Figure 8. Make sure to only tighten halfway and then repeat the pattern in Figure 8 until backing block is tight.

STEP 6
A. Attach the bracket (PB501026A) to the fender.
   a. Drill six 5/16” holes through the fender using the holes in bracket PB501026A as a guide.
   b. Install the 5/16” x 1” bolts through the bracket and into the fender.
   c. Use six 5/16” body washers and 5/16” nuts provided with the kit on the underside of the fender.
   d. Do not over tighten bolts as it may crack the bracket. Hand tightening of the bolts is recommended.
   e. Make sure the fenders are square and aligned (Figure 9). Twists or bows in the fender will fatigue the material over time.

STEP 7
A. When the fender is level and positioned properly, tighten all bolts and nuts securely.

NOTE: OCCASIONALLY CHECK THE 5/8” X 4-1/2” HEX BOLTS ON THE FRAME TO MAKE SURE THEY DO NOT LOOSEENG OVER TIME.
