

Installation Instructions for Fender Bracket Kit 10001323

Document #10004982, Revision A

Brackets are Compatible with Models:

MIN100, MIN150, MIN2200, MIN2260 & MIN2480.

STEP 1 - IDENTIFY PARTS

- A. Lay out parts and hardware packs.
- B. Compare the parts and hardware with bracket kit 10001323 as shown in **Figure 1**.

FIGURE 1

ITEM NO.	PART NUMBER	QTY.
1	10001474	4
2	10003038	4
3	10001477	4
4	10001479	4
5	10003046	4
6	10003173	4

If any of the listed pieces are missing, please call Minimizer at 800-248-3855

STEP 2 - DETERMINE SIZE OF SPACERS AND POSITION FENDERS

- A. Confirm the total suspension travel distance. This is used to determine the clearance required between the fender and tire.
 - a. For air suspension systems, dump the air bags and confirm it is the lowest point of travel.
 - i. Understand that some air suspension designs may cause the wheels to roll closer to the fender (roll forward) as the suspension deflates. In order to make sure the fenders are centered on the tires, test the suspension in the inflated and deflated positions to determine the best positioning so that the fenders are centered over the tires in the inflated position.
 - ii. For air suspensions with travel exceeding 6", a travel stop may need to be installed to reduce required clearance between the fenders and tires. This will also improve alignment and 5th wheel plate clearance.
(Please call Minimizer @ 800-248-3855 for questions regarding this issue).
 - b. For spring systems, measure the distance between the spring assembly and the bump stop on the frame and record the measurement.
- B. Place the fenders on spacer blocks above the tires.
 - a. In most applications 1.5" of tire clearance is best. The goal is to ensure the fender does not rub the tire.
 - i. The minimum clearance recommended is $\frac{3}{4}$ " above the maximum travel point of the suspension system.
 - b. For an air suspension system, place a $\frac{3}{4}$ " to 1.5" thick board on top of the tires after the air is released from the airbags. (See **Figure 2**)
 - c. For spring suspensions use spacer material that is $\frac{3}{4}$ " to 1.5" thicker than the measurement recorded above.
- C. For trucks with air suspension, raise and lower the suspension to confirm the clearance between the fenders and wheels and that the fenders will be centered front to rear when the air suspension is inflated.

FIGURE 2

Installation Instructions for Fender Bracket Kit 10001323

Document #10004982, Revision A

Brackets are Compatible with Models:

MIN100, MIN150, MIN2200, MIN2260 & MIN2480.

STEP 3 - POSITION BRACKETS AND REVIEW MUDFLAP CONFIGURATION

- A. With the fenders in position, mark and test fit the brackets where they will attach to the frame.
- B. If possible, use existing bolt holes in the frame to attach.

Tip: It is common for the front bracket to align with the existing quarter fender holes and the rear bracket to align with the holes left from the mud flap hanger.

- C. If possible, position the mounting brackets low on the fender so they are no more than 15" from the bottom. (See Figure 3)
 - a. Brackets mounted 8-12" from the edge is optimal.
 - b. The goal is to reduce the risk of the leading edge of the fender from blowing back against the tire during high wind.

Tip: If the front fender bracket is mounted higher than 15", refer to the link below for further suggestions on adding additional support
<http://www.minimizer.com/instructions.html>

NOTES:

- In some applications the rear fender will tuck inside the mud flap hanger as shown in **Figure 4**. This is the recommended configuration.
- Minimizer recommends using a separate hanger to hold the mudflap that is independent from the fender assembly.
- If a mudflap attached to a lighted fender is backed over, the fender and mounting brackets may be damaged.
- If there is no other option but to attach mudflaps to the fender, best practice is to cut vertical slots in the mudflap (in line with the mounting holes) to allow it to break away from the fender.

Warning: Attaching a mudflap to the bottom of a lighted fender as shown in **Figure 5** will void manufacturer's warranty.

FIGURE 3

FIGURE 4

FIGURE 5 - NOT RECOMMENDED

Installation Instructions for Fender Bracket Kit 10001323

Document #10004982, Revision A

Brackets are Compatible with Models:

MIN100, MIN150, MIN2200, MIN2260 & MIN2480.

- Round spacers are supplied to hold the (10001474) swivel bracket away from the frame when needed. In some cases, frame components may interfere with the required bracket location and require a spacer. (See Figure 6)
- Trim the pipe component of the swivel bracket as needed.
- **USE SPACERS ONLY WHEN NECESSARY!** The ideal installation is to mount the (10001474) swivel bracket directly to the frame using no spacers.
- If using the mounting hole inside the pipe of the swivel bracket, the excess flat steel may be trimmed off to provide a cleaner look.

FIGURE 7

FIGURE 8

FIGURE 9

STEP 4 - ATTACH BRACKETS TO TRUCK FRAME

- Once the brackets are in position with the fender, tighten the 5/8" x 4-1/2" bolt that goes through the (10001474) swivel bracket to attach the swivel securely to the frame. (See Figure 7)
 - Recommended torque is 160-170 ft-lbs.**

STEP 5 - PREP THE FENDERS

- Slide the (10001477) paddle bracket over the (10001474) swivel bracket.
 - Make sure the pipe of the (10001474) is fully inserted into the paddle bracket.**
- Verify that the fenders are level across the frame and aligned with the tires for optimal clearance. Fenders that are installed in a deformed or twisted state, may lead to material fatigue and reduce the life of the fender.
 - Rotate the (10001477) paddle bracket so it makes good contact with fender.
- Attach the drilling template provided in the kit to the surface of the fender.
 - Insert the drilling template between the fender and (10001477) paddle bracket as shown in **Figure 8**.
 - Apply tape to the tabs of the template to secure it in place as shown in **Figure 9**.
 - Remove the fender from the wheels and confirm that the templates are secure.
- With the fender removed, drill six 3/8" holes through the fender using the template as a guide.
 - Kit includes one drilling template per paddle bracket.
 - Once drilling is complete, remove templates.

Installation Instructions for Fender Bracket Kit 10001323

Document #10004982, Revision A

Brackets are Compatible with Models:

MIN100, MIN150, MIN2200, MIN2260 & MIN2480.

STEP 6 - ATTACH FENDER TO BRACKETS

- A. Remove the (10001477) paddle bracket from the (10001474) swivel and attach the fender to the (10001477) paddle bracket with six 5/16" x 5/8" bolts and 5/16" fender washers.
 - a. **Turn each bolt approximately 2 full turns. Do not fully tighten.**
- B. Once both paddle brackets are attached to the fender, slide the (10001479) stainless clamps over the end of the (10001477) paddle brackets.
- C. Carefully lift the fender over the tires and slide the (10001477) paddle brackets onto the (10001474) swivel brackets that are mounted on the frame. **(See Figure 10)**
 - a. Make sure the pipe of the (10001474) is fully inserted into the paddle bracket.
 - b. Position the (10001479) stainless clamp 1/4" from the edge of the paddle bracket.
 - c. **Recommended torque for (10001479) is 50 ft-lbs. (15mm. wrench or deep socket needed.)**
 - d. Properly tightened (10001479) stainless clamp should look like the image in **Figure 11**.
- D. Tighten all of the 5/16" fender bolts used to attach the paddle brackets in step 6A.
 - a. **Recommended torque is 10 ft-lbs.**

FIGURE 10

FIGURE 11

STEP 7 - INSPECT AND REPEAT FOR ALL FENDERS

- A. For trucks with air suspension, raise and lower the suspension one final time to confirm that there is adequate clearance between the fenders and wheels.
- B. Repeat the install process for all fenders.
- C. Once fenders are in service, occasionally inspect the 5/8" bolts in the frame to confirm they do not loosen over time.
