

Installation Instructions for Steerable Lift Axle Fender Bracket Kit 10001457

Document #10003186, Revision A

Brackets are Compatible with Models:

Watson Chalin SL13K-1190 Axle Equipped with Bendix Disc Brakes.

(Designed for use with MIN161200, MIN221800 & MIN2220 Fenders.)

STEP 1 - IDENTIFY PARTS

- A. Lay out parts and hardware packs.
- B. Compare the parts and hardware with bracket kit 10001457 as shown in **Figure 1**.

FIGURE 1

STEP 2 - ATTACH BRACKETS TO TRUCK

- A. Starting on the right side of the truck, remove the three upper M20 bolts and flat washers from the brake caliper assembly located at the front of the axle. **(See Figure 2)**
 - a. Save the flat washers and discard the old M20 bolts.
- B. Install the (10001497) fender bracket using three new M20 bolts provided in the kit along with the flat washers previously removed in step 2A.
 - a. The (10001497) fender bracket should be mounted inward, towards the frame.
 - b. **Recommended torque is 375 ft.-lbs.**

FIGURE 2

- C. Remove the three M20 bolts and flat washers from the brake caliper below the brake chamber assembly on the lower rear side of the axle. **(See Figure 3)**
 - a. Save the flat washers and discard the old M20 bolts.
 - b. A 3/4" drive to 1/2" drive socket adapter will be necessary to clear the tie rod.
- D. Install the (10001499) fender bracket using three new M20 bolts provided in the kit along with the flat washers previously removed in step 2C.
 - a. The (10001499) fender bracket should be mounted inward, towards the frame.
 - b. **Recommended torque is 375 ft.-lbs.**
- E. Verify that there is clearance between the wheel and the rear fender bracket. Loosen the bracket and adjust clearance if necessary.

NOTE:

- Repeat step 2 on the left side using fender brackets (10001496) and (10001498).

STEP 3 - POSITION BRACKETS AND FENDERS

- A. Place the Minimizer fender over the tire using shims for clearance. **(See Figure 4)**
 - a. For MIN161200 fenders, place a 3/4" block on top of the tire to establish a clearance between the tire and fender. **(See Figure 5)**
 - i. For MIN221800 and MIN2220 fenders, use a 1-1/2" block to establish clearance.
- B. Measure the distance from the floor to the bottom edge of the fender on both ends and adjust the position of the fender until both distances are equal.
 - a. The aluminum arms may need to be adjusted inward or outward, so they make even contact with the fender.

- C. Clamp the (10001492) aluminum arms to the fender bracket per the steps listed below:
 - a. For MIN161200 fenders, align the (10001492) aluminum arms to the outside face of the fender and to the inside face of the fender brackets. **(See Figure 6)**
 - i. For the MIN221800 and MIN2220 fenders, align the aluminum arms to the inside face of the fender and to the outside face of the fender bracket.
 - b. Clamp the aluminum arm to the surface of the steel fender bracket with a vice grip clamp.
 - c. Depending on the fender model used, the aluminum arms may be longer than needed.
 - i. If necessary, trim any excess material from the aluminum arms that extends past the bend in the mounting plate. **(See Figure 7)**

- D. Use the holes in the steel bracket attached to the axle as a template to locate and mark the mounting holes in the aluminum arms. (See Figure 8)
- E. Drill two 9/16" holes in each aluminum arm in the locations that were marked in the previous step.
- F. Bolt the aluminum arms to the steel fender brackets using the 1/2" x 2" flange head bolts and the 1/2" top lock flange nuts. (See Figure 9)
 - a. Recommended torque is 75-83 ft.-lbs.

STEP 4 - ATTACH FENDER TO BRACKETS

- A. Attach the (10001492) aluminum arms and (10001463) steel backing plates to the fender. (See Figure 10)
- B. The (10001463) steel backing plates are not needed when installing the MIN161200 fenders and may be discarded.

NOTE:

- Figure 10 is for reference. The aluminum arm can be mounted on the outside face or inside face depending on the fender used.
- The (10001463) steel backing plate and the (10001492) aluminum arm **MUST** be installed on opposing faces of the fender to be eligible for Minimizer warranty.

- C. Confirm that the fender is parallel to the tire.
- D. Align the (10001463) steel backing plate so it is even (top to bottom) with the (10001492) aluminum arm. Use one plate per aluminum arm.
- E. Drill two clearance holes or tap threads in the aluminum arms.
 - a. Option 1 is to drill two 11/32" diameter holes thru the fender and aluminum arm using the steel backing plate as a template.
 - i. Use two 5/16"-18 bolts with self-locking nuts provided in the kit.
 - b. Option 2 is to drill and tap 5/16"-18 threads into the aluminum arm using the steel backing plate as a template. This option provides increased tire clearance.
 - i. Shorter 5/16" bolts are required for option 2 and are not included in the kit.
- F. Install fender bolts. **Recommended torque is 5-7 ft.-lbs.**
 - a. **DO NOT EXCEED THE RECOMMENDED TORQUE.**

STEP 5 - INSPECT AND REPEAT FOR ALL FENDERS

- A. Repeat steps 2 thru 4 to install the bracket and fender on the opposite side of the vehicle.
